GENERAL INSTRUCTIONS

AGPRO RED MARKER DYE is a non-toxic temporary red pattern indicator for use in many agricultural, turf and industrial applications. The bright red colour shows you exactly where liquid pesticides and fertilisers have been applied. It helps to prevent skips and overlaps, and aids detecting spray drift.

COMPATABILITY:

Compatible with most pesticides and foliar fertilisers, however a small trial is recommended.

MIXING PROCEEDURE:

Add the desired amount of AGPRO RED MARKER DYE directly into the partly filled spray tank after the pesticide or foliar fertilizer has been added. Agitate while filling with remaining amount of water. To ensure the AGPRO RED MARKER DYE is completely dispersed.

APPLICATION RATES:

The dosing rate depends on the type of terrain being treated, intensity of colour required and the period the marker is to remain visible. The user should adjust the dosing rate to establish a rate that is economical and practical for his particular situation. The higher the dosing rate the darker the spray pattern. A suggested starting rate is 30-50ml/100L.

STORAGE AND DISPOSAL:

Store in the closed original container in a cool, dry, place well ventilated area out of direct sunlight and away from foodstuffs and drink containers. Triple rinse empty containers adding the residue to the spray tank. Dispose of empty container by burial at an approved disposal site.

SAFETY PRECAUTIONS:

- Keep out of reach of children
- Avoid contact with eyes and skin
- Do Not inhale spray mist
- Wash hands with soap and water after use.

CONDITIONS OF SALE:

The use of AGPRO RED MARKER DYE herbicide being beyond the control of the manufacturer, no warranty expressed or implied is given by AGPRO NZ LTD regarding its suitability, fitness or efficiency for any purpose which it is used by the buyer, whether in accordance with the directions or not and AGPRO NZ LTD accepts no responsibility for any consequence whatsoever resulting from the use of this product.
